

## Configuration Options

### Grid Tie

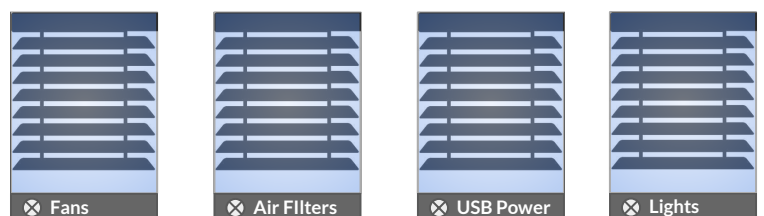

Energy goes to the main electrical panel where it is consumed in real time or exported to the grid for net-metering.

### Micro Grid

A battery can be directly connected to the blinds to provide reliable clean power to outlets and devices.

### Self Powered Appliance

Self powered motorized blinds generate energy to power integrated fans, air filters, USB or standard power outlets, and/or to power nearby lights.

## Colour/Texture Options

Energy Blinds can be fabricated with virtually any interior colour or texture. Available options include textiles of almost any colour ([Fabric Samples](#)).

Strings and grommets colour match the interior. The exterior surface resembles carbon fiber and is matte black.
